

Tusk UTV Cargo Box Top Rack

Thanks for your purchase of the Tusk Cargo Box Top Rack. Please take note of the information and instructions below to get the most out of your Tusk Product. If you don't feel comfortable with this install, please have a qualified mechanic install for you.

For instructional videos, refer to www.rockymountainatvmc.com/videos

Note: This top rack is intended for use with the Tusk UTV Cargo Box, Rocky Mountain ATV/MC part number 1845330001.

Kit Contents:

- Top Rack Rails (2)
- 3/16" Aluminum Rivet (10)

Mounting Instructions

1. Start by holding one side rail up to the lid of your Tusk UTV Cargo Box. This works best with an extra set of hands. Have a friend mark where each rivet hole needs to be drilled.
2. Once you have all of the holes marked, drill one outside hole with a 3/16" drill bit. Don't go through and drill all of them as you could be slightly off.
3. Install one rivet through the top rack rail and into the one hole you drilled. Now you can hold up the rail to make sure all of your other holes are lining up correctly.
4. Drill out the other outside hole and install a rivet through the rail piece and into the cargo box.
5. With the two outside rivets installed you can now go through and drill out the other four holes and install the rivets.
6. Repeat these steps on the other side and your top rack will be completely installed.

Attention: These rails are designed to lightly secure items to the top of your Tusk UTV Cargo Box. Bungees or ROK Straps work great for the slotted tie down holes.
